

Golf Weather - Compensating for Wind

There are many factors to consider before you choose a club and take a swing. One of the biggest factors to consider is golf weather. While a wet course will make your ball roll slower and a dry course will have the opposite affect, it's really the wind that will have the biggest impact on your round of golf. Wind affects the direction your ball will go after you hit it and even after it touches the ground. Here are some basic golf tips for helping you compensate for wind.

The majority of golfers are right handed so we'll go over this as if you are right handed. If you are left handed then you'll need to adjust accordingly.

The first thing to do is determine which way the wind is blowing. If the wind is blowing on your back then you'll strike the ball softer than usual especially if it is a brisk wind. This can certainly work in your favor especially on a drive. Hit the ball high and let the wind do most of the work. If the wind is blowing directly into the front of you then the opposite is the case; strike the ball harder than you normally would to counteract the force of the wind.

What if the wind is blowing from the right or left? If you don't compensate then you'll find that your shot will fall to the left or right of your intended target and might end up rolling completely off the green. For example, if your hole is 150 yards from the tee box and the flag is in the middle of the green you'll need to alter your stance to compensate. Depending on the amount of wind you may also need to keep the ball low so the trajectory is not as greatly impacted. If the wind is blowing severely then you may consider choosing a club bigger than usual; a five or six iron instead of a seven iron.

Usually a breeze won't have a huge impact on putting since the wind is less powerful near the ground but this isn't always the case. If you are on a rise or the wind is very powerful then you'll also need to compensate on these shots.

To play golf you have to take into account a number of factors and wind is one that shouldn't be underestimated. Next time there is a windy day, don't skip on golfing but take advantage of it and practice on the driving range so you know how to compensate. Playing [golf in Spain](#) is different than playing in the US or China.
